# Artwork Guidelines

Speed up your order by ensuring your design meets the guidelines below. We'll still check your artwork and send over proofs before going to print.

**1. File Type** - We recommend sending a PDF of your artwork. TIF or AI files are accepted but must be flattened before sending.

**2. Size & Scale** - Always supply full-size files unless your artwork is larger than 4500mm. Any artwork larger than this should be supplied at 10%.

**3. Bleed** - There is a 10mm bleed at full size so keep this in mind when creating your artwork to ensure none of your design is cut off.

**4. Colour Settings** - All colours should be CMYK. We can convert RGB to CMYK but this can cause unexpected results.

**5. Colour Matching** - There may be some slight colour variation from one supplier to the next. It's also worth noting that you may not see an exact colour match compared to what you see on screen. Your screen's resolution can impact the colour you expect to be printed.

**6. Texts & Fonts** - Ensure text and fonts are outlined, even on PDF files. Alternatively, you can supply fonts as a packaged folder.

**7. Images** - Embed all images before saving. Linked images in a folder are not recommended and could delay the order process.

**8. Resolution** - Please save your artwork and aim for a minimum of 50 DPI at print size. For artwork advice, don't hesitate to get in touch.
